

Integrating On-Premise and Cloud Active Directories

implement.com is offering service providers a package of consulting services to deploy Microsoft Forefront Identity Manager (FIM) 2010 as the enabling technology to synchronize user accounts and passwords across on-premise and hosted AD platforms to achieve cost savings and an improved user experience.

FIM Services for Service Providers

Leverage FIM to offer your customers more flexible options for integrating their existing AD forest with your hosted services:

- Planning workshop to develop implementation design and architecture
- Control Panel integration gap analysis and planning
- Fully functional deployment in your lab
- In-depth technical drilldown on using Active Directory Trust to achieve a Single Sign-On capability
- Test & walk-thru integration scenarios

FIM Deployment Package Offering

- Deliverables include:
 - Architectural Design Session and Proof of Concept (ADS/POC) workshop
 - Functioning lab deployment
 - Proposed design and architecture document
 - Infrastructure gap analysis and proposed remediation steps
- Fixed price engagement \$15,000 (excluding travel expenses)
 - Remote or onsite delivery
 - Includes 100 consulting hours with one of our senior engineers
